Global Style
Inline Style I
Conditional Style

Create component Style.js

```js
import React from 'react';

export default function Style()
{
    return <div>
        <h1>React Style</h1>
    </div>
}
```

Create a custom.css

Import the stylesheet in style.js file

```
JS Style.js ▷ ⬡ Style
    import React from 'react';
    import './custom.css'
    export default function Style()
    {
        return <div>
            <h1 className="header" >React Style</h1>
        </div>

    }
```

Call the style.js inside app.js file:-

```js
App.js ▸ App ▸ render
    import React from 'react';
    import Style from './Style'
    class App extends React.Component {
        render() {
            return (
                <div>
                    <Style />
                </div>
            );
        }
    }
    export default App;
```

Inline style:-

```
import React from 'react';
import './custom.css'
export default function Style()
{
    const h2={
        color:'green',
        fontSize:'36px'
    }
    return <div>
        <h1 className="header" >React Global Style</h1>
        <h2 style={h2} >React Inline Style</h2>

    </div>
}
```

Conditional stylesheet:--pass props

```js
JS App.js ▶ App ▶ render
import React from 'react';
import Style from './Style'
class App extends React.Component {
  render() {
    return (
      <div>
        <Style data="apply" />
      </div>
    );
  }
}
export default App;
```

```javascript
1   import React from 'react';
2   import './custom.css'
3   export default function Style(prop)
4   {
5       const h2={
6           color:'green',
7           fontSize:'36px'
8       }
9       return <div>
10          <h1 className="header" >React Global Style</h1>
11          <h2 style={prop.data=='apply'? h2:""} >React Inline Style<
12
13      </div>
14  }
```

```
 2    import './custom.css'
 3    export default function Style(prop)
 4    {
 5        const h2={
 6            color:'green',
 7            fontSize:'36px'
 8        }
 9        const h3={
10            color:'red',
11            fontSize:'24'
12        }
13        return <div>
14            <h1 className="header" >React Global Style</h1>
15            <h2 style={prop.data=='apply'? h2:h3} >React Inline Style</
16                              ⊟ h3                              const h3: {
17        </div>
18    }
```

Thanks
